

THE CAPNCM PROMISE

Community Action changes people's lives, embodies the spirit of hope, improves communities, and makes America a better place to live. We care about the entire community, and we are dedicated to helping people help themselves and each other.

Community Action Partnership of North Central Missouri offers services to individuals to become self-sufficient by empowering them to obtain the resources needed to build strong families & communities.

Equal Opportunity Employer/Program. Auxiliary aids & services available upon request to individuals with disabilities.

Weatherization Works!

We have experienced energy auditors and weatherization crews with decades of experience in making your energy bills more affordable.

Our weatherization work results in homeowners saving about 30% on air infiltration for the home. Our proven technology will save money each month both winter and summer. Some homeowners may even receive new refrigerators or new furnaces.

Rental units may be weatherized with the landlord paying a 10% fee to offset the cost of weatherizing the home.

Strong Families = Strong Communities

Weatherization?

The main purpose of the Weatherization Program is to save energy. Saving energy cuts heating costs in the winter & cooling costs in the summer.

A special blower door checks the home for air leaks.

Projects Funded By:
American Recovery & Reinvestment Act,
U.S. Department of Energy, &
Transform America

All clients must first fill out a weatherization application and provide our office with the appropriate information (proof of income, copy of utility bills, and proof of ownership or landlord information). After applications are received and approved in the Trenton Office, they are placed into onto a waiting list utilizing a point system.

How Does This All Work?

Points are awarded for age, income level, disability, number of months waiting, type & amount of fuel burned, & size of family. The family accumulating the most points based on these factors moves to the top of the list.

Selected homes are then inspected by one of our energy auditors. The inspection covers many areas, including insulation, doors, windows, foundation condition, height & width of walls and the attic, & overall condition of the structure.

This audit information is then entered into a computer program to determine the most cost-effective measures of weatherization for the home.

Before any weatherization work can begin, testing of the heating system must also be done. These tests are performed to be sure the heating system is working in a safe and efficient manner. If any problems are discovered during the tests, a furnace contractor will repair, or in some cases, replace the heating system.

After work is completed, a final inspection of the home occurs to make sure all work was completed in a professional manner. Clients are also asked to complete a short survey to let us know how we are doing.

Call 660-359-3907 for your application!

REAL UTILITY SAVINGS

The U.S. Department of Energy estimates that the weatherization of a home means the owner will realize a substantial savings annually in fuel costs.

FUEL CONSERVATION

Missouri, which imports 83% of its fossil fuels, conserves more than 450,000 barrels of oil annually as a result of its weatherization efforts.

WORKING FOR THE FUTURE

Over the next three program years, CAPNCM will receive more than \$1 million for its weatherization program. We anticipate weatherizing more than **200 homes** with these funds!

Community Action Partnership of North Central Missouri has weatherized more than 5,000 homes within our service area.
